

GAUGEMASTER GM68 Track Ballasting Aid N Scale

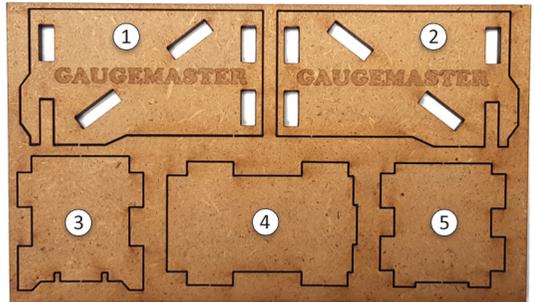

This laser-cut ballasting tool is supplied flat-packed but is easy to assemble. Add the ballast to the top of the tool and run it along the tracks for perfectly laid ballast. Then just fix it down with your favourite ballasting method. Take a look at the articles on our website to explore the different methods.

Use the diagrams to the left and below to align the parts correctly, then use a suitable wood glue (such as Deluxe Materials **DLAD-87** Laser Cut Kit Glue) to bond the parts together. Make sure you leave the glue to dry completely before use.

Useful Products

- GM111** Brown Ballast OO Scale (500g)
- GM113** Brown Ballast N Scale (500g)

WARNING

This kit contains necessary small parts, which may be harmful if swallowed. Not suitable for children under 14 years old without adult supervision.

Always wear protective equipment such as a face-mask and eye protection when building MDF kits, to avoid inhalation of dust and particles.

While building the kit be careful when using sharp knives, glues, and solvents. To avoid injury always follow the instructions provided with any tools or equipment used.

GAUGEMASTER

Gaugemaster are one of the largest model shops in the UK, with over fifty thousand products listed – many of which are in stock.

We stock the finest model railway items from companies from all around the world, so you will almost certainly find what you need – no matter what scale, period, or location that you model.

Our friendly, helpful staff are only a phone call or an email away.

Gaugemaster has everything you need to turn your Train Set into a Model Railway.
